Virginia Green Travel Leader Award Summary

- ✓ Operating for 25 years, the bed and breakfast is blending the old with the new, promoting both the building's 200-year history and the modern potential of measures to protect wildlife and the environment.
- ✓ Oak Grove Plantation Bed & Breakfast has become the first B & B in the state to install photovoltaic solar panels, both to save on energy and to attract environmentally-conscious customers.
- ✓ The inn recycles, has a compost pile for vegetable scraps and has installed "low-e" energy-efficient storm windows on the south side. Motorists who arrive in hybrids get a third night free. Also, there is optional linen service and all the laundry on site dries on a clothesline. Rain barrels collect water; the inn has a tankless electric hot water heater, and uses compact fluorescent lighting.

Continued Excellence: Oak Grove Plantation B&B won the Virginia Green Travel Star Award in 2013.

Virginia Green is run through a partnership between:

VIRGINIA IS FOR LOVERS
